DETAILED ACTION

Allowable Subject Matter

1. Claims 13-21 are allowed.
2. The following is an examiner's statement of reasons for allowance: Applicants teach an apparatus for estimating a level of spectral whitening to be applied to a signal prior to a high frequency regeneration step or after the high-frequency regeneration step to be performed when generating a high-frequency regenerated signal having a highband which is based on a lowband signal, wherein the spectral whitening is obtained by filtering using a spectral whitening filter, the spectral whitening filter being an adaptive filter being adaptable by means of a filter parameter comprising an estimator for estimating a tonal character of an original signal to be encoded, at a given time, wherein the original audio signal is to be encoded by an audio coder to obtain an encoded audio signal representing only a lowband of the original audio signal, the estimated tonal character including an estimated tonal character of a highband of the original audio signal, which is not included in the encoded audio signal, and a determinator for determining a varying filter parameter of the spectral whitening filter based on the estimated tonal character, and an associator for associating the varying filter parameter to the encoded audio signal to obtain a bit stream having the encoded audio signal having the varying filter parameter, the varying filter parameter being

dependent on the encoded audio signal. The cited prior art alone or in combination does not fairly suggest or teach the claimed combination of features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
